PROFILE

I am a Ph.D. Computational Engineer with a research background in advanced numerical methods, multi-physics simulation, and fracture mechanics. My doctoral work focused on developing and implementing the Scaled Boundary Finite Element Method (SBFEM) for coupled thermoelastic problems in engineered materials. Beyond research, I have built practical skills in software development, workflow automation, and system integration, applying them in a production environment. I bring a rare combination of research depth and hands-on engineering practice, bridging advanced simulation and numerical methods with modern software development and automation.

PROFESSIONAL EXPERIENCE

07/2025 - present

Systems Engineer

CleverBuy GmbH, Krefeld, Germany

- Designed and built an automation system that replaces time-consuming manual workflows with automated, real-time processes running across multiple connected business systems.
- Built an asynchronous job engine that continuously evaluates and applies business rules over large volumes of operational data, removing the need for manual monitoring or intervention.
- Developed API integrations connecting several external platforms, enabling reliable and automated data exchange across systems.
- Designing an AI integration layer that gives a language model structured access to the business database, enabling users to query, plan, and action changes through natural conversation.

08/2024 - 06/2025

Professional Development

- Pursued self-directed learning in full-stack development, data science, and machine learning, strengthening and expanding core engineering competencies.

08/2017 - 03/2024

Research Assistant

University of Duisburg-Essen, Essen, Germany

- Designed, developed, and implemented numerical method (SBFEM) in MATLAB for multi-physics simulation.
- Utilized ANSYS, Abaqus, and FEAP for advanced simulations, including scripting for automation and customization.
- Taught graduate courses in Structural Dynamics and programming with ANSYS, Fortran, C++, and Python.
- Supervised three master's one bachelor's theses on diverse topics in computational mechanics.
- Managed an e-learning project to digitize course content and develop tools like inverted classroom and virtual labs.

PROFESSIONAL EXPERIENCE

01/2020 - 03/2020

Visiting Researcher

Federation University, Ballarat, Australia

- Collaborated with the University of Duisburg-Essen and Federation University under a prestigious Australia-Germany research grant, advancing SBFEM for modeling thermoelastic fracture in specialized engineering materials.

01/2017 - 03/2017

Student Assistant

University of Duisburg-Essen, Essen, Germany

- Implemented a polygon-based SBFEM in FORTRAN and integrated it into the open-source software FEAPpv.

06/2015 - 10/2015

Student Worker

Mercedes-Benz Group AG, Düsseldorf, Germany

- Executed spot welding with jigs and performed automotive assembly line tasks.

10/2014 - 12/2014

Student Worker

Mercedes-Benz Group AG, Rastatt, Germany

- Carried out production tasks on automotive assembly line.

12/2013 - 12/2013

Logistics Assistant

Amazon Deutschland Services GmbH, Rheinberg, Germany

- Scanned items and prepared them for packaging.

06/2011 - 07/2011

Internship

Karachi Tools, Dies & Moulds Center, Karachi, Pakistan

- Practical training in CAD/CAM and nitriding heat treatment.

CORE COMPETENCIES

- Multi-Physics Simulation
- Numerical Methods
- Engineering Materials
- Software Development
- Workflow Automation
- Project Management

SKILLS

Numerical Methods:	• SBFEM	• FEM	• XFEM	• CFD
Simulation Tools:	• ANSYS	• Abaqus	• Gmsh	• ParaView
Programming:	• MATLAB	• Python	• Fortran	• C++
Dev. Stack:	• Django	• PostgreSQL	• REST APIs	• Git

EDUCATION

08/2017 - 07/2024

Ph.D. Computational Mechanics

University of Duisburg-Essen, Germany

- Thesis: Development of scaled boundary polygon elements for coupled thermoelastic fracture modeling.
- Grade: Magna cum laude (1.0)

EDUCATION

10/2013 - 07/2017

M.Sc. Computational Mechanics

University of Duisburg-Essen, Germany

- Thesis: Development of polygon elements based on the scaled boundary finite element method.
- Grade: Good (2.0)

01/2009 - 12/2012

B.E. Automotive Engineering

NED University of Engineering & Technology, Pakistan

- Thesis: Design and analysis of motorcycle oil pump.
- Project: Design, development, and manufacturing of Formula Student car.
- Grade: First Division (2.5)
