PROFILE

Ph.D. in Computational Mechanics with over six years of research in numerical methods, multi-physics simulation, and fracture mechanics. Four peer-reviewed journal publications, international research collaboration, and multiple conference presentations. Complemented by industry experience in software development, data pipelines, API integration, and workflow automation.

PROFESSIONAL EXPERIENCE

07/2025 - present

Software Engineer

CleverBuy GmbH, Krefeld, Germany

- Developed automation systems replacing manual workflows with real-time, automated processes across multiple connected business systems.
- Built large-scale data pipelines integrating third-party platforms via APIs for continuous, automated data exchange and processing.
- Designed and implemented an asynchronous job engine using Celery for continuous rule-based evaluation over large volumes of operational data.
- Scoping an AI integration layer to connect a language model to structured business data for natural language querying and insights.

08/2024 - 06/2025

Professional Development

- Pursued self-directed learning in full-stack development, data science, and machine learning as part of a deliberate transition from academic research into industry engineering roles.

08/2017 - 03/2024

Research Assistant

University of Duisburg-Essen, Essen, Germany

- Developed and implemented the Scaled Boundary Finite Element Method (SBFEM) in MATLAB to simulate thermoelastic fracture in specialized engineering materials.
- Utilized ANSYS, Abaqus, Gmsh, and ParaView for advanced simulations, including scripting for automation and customization.
- Published four peer-reviewed journal papers in Computer Methods in Applied Mechanics and Engineering, Engineering Fracture Mechanics, and Theoretical and Applied Fracture Mechanics.
- Conducted research in collaboration with international institutions and presented research at multiple international conferences.
- Taught graduate courses in Structural Dynamics and programming with ANSYS, Fortran, C++, and Python.
- Supervised three master's and one bachelor's thesis in computational mechanics.
- Managed an e-learning project to digitize course content and develop tools including virtual labs and inverted classroom formats.

PROFESSIONAL EXPERIENCE

01/2020 - 03/2020

Visiting Researcher

Federation University, Ballarat, Australia

- Collaborated with the University of Duisburg-Essen and Federation University under a prestigious Australia-Germany research grant, advancing SBFEM for modeling thermoelastic fracture in specialized engineering materials.

01/2017 - 03/2017

Student Assistant

University of Duisburg-Essen, Essen, Germany

- Implemented a polygon-based SBFEM in FORTRAN and integrated it into the open-source software FEAPpv.

06/2015 - 10/2015

Student Worker

Mercedes-Benz Group AG, Düsseldorf, Germany

- Executed spot welding with jigs and performed automotive assembly line tasks.

10/2014 - 12/2014

Student Worker

Mercedes-Benz Group AG, Rastatt, Germany

- Carried out production tasks on automotive assembly line.

12/2013 - 12/2013

Logistics Assistant

Amazon Deutschland Services GmbH, Rheinberg, Germany

- Scanned items and prepared them for packaging.

06/2011 - 07/2011

Internship

Karachi Tools, Dies & Moulds Center, Karachi, Pakistan

- Practical training in CAD/CAM and nitriding heat treatment.

CORE COMPETENCIES

- Multi-Physics Simulation
- Numerical Methods
- Scientific Computing
- Software Development
- Workflow Automation
- Project Management

SKILLS

Numerical Methods:	• SBFEM	• FEM	• XFEM	• CFD
Simulation Tools:	• ANSYS	• Abaqus	• Gmsh	• ParaView
Programming:	• MATLAB	• Python	• Fortran	• C++
Dev. Stack:	• Django	• PostgreSQL	• REST APIs	• Git

EDUCATION

08/2017 - 07/2024

Ph.D. Computational Mechanics

University of Duisburg-Essen, Germany

- Thesis: Development of scaled boundary polygon elements for coupled thermoelastic fracture modeling.
- Grade: Magna cum laude (1.0)

EDUCATION

10/2013 - 07/2017

M.Sc. Computational Mechanics

University of Duisburg-Essen, Germany

- Thesis: Development of polygon elements based on the scaled boundary finite element method.
- Grade: Good (2.0)

01/2009 - 12/2012

B.E. Automotive Engineering

NED University of Engineering & Technology, Pakistan

- Thesis: Design and analysis of motorcycle oil pump.
- Project: Design, development, and manufacturing of Formula Student car.
- Grade: First Division

PUBLICATIONS

Peer-Reviewed Journal Papers
